Acids and bases do not require much math at the organic chemistry level. Instead you will be required to understand what makes a strong acid or weak conjugate base. Your goal is to understand the nature of acidity and basicity so that you can comfortably rank the strong and weak molecules based on structure and conjugates.

An acid and a base can be combined in what is known as a neutralization reaction. In this reaction, the pH will become something between the pH's of the acid and the base. When they are combined, the products are water (from the H+ and OH- ions) and an ionic compound known as a salt. Name 3 characteristics that acids and bases share.
