Bayesian Computation with R focuses primarily on providing the reader with a basic understanding of Bayesian thinking and the relevant analytic tools included in R. It does not explore either of those areas in detail, though it does hit the key points for both.

Exercises for "Bayesian
Computation with R"

Rainer Hirk & Kurt

Hornik WS 2019/2020

1. This problem deals with the analysis of the daily exchange rates Bitcoin/US dollar in year 2015. We fit an AR(1) process to the time series of log returns: $r_t = \alpha + \rho r_{t-1} + \epsilon_t$; where $\epsilon_t \text{ iid } \sim N(0; \sigma^2)$ and t is the day indicator.
