photosynthesis Flashcards ...

~~Chapter 8 "Photosynthesis" (12-8-18 to
1-10-19) Mr. King ...~~

1. plants need sunlight to produce oxygen. 2. plants gain most of their mass by taking in water. 3. using a candle and a jar, observed that plants produce a substance that kept the candle burning. 4. measured the mass of the soil in which a plant grew. 5. observed plants exposed to light. Short Answer On the lines provided, answer the following ...

~~Ch. 8 Answer Key~~

Chapter 8 Cellular Energy Section 1:
How Organisms Obtain Energy Section
2: Photosynthesis Section 3: Cellular
Respiration Transformation of Energy
Energy is the ability to do work. 8.1 How
Organisms Obtain Energy Cellular
Energy Thermodynamics is the study of
the flow and transformation of energy in

Section Review 8-1 1. Autotrophs get
energy from the sun in the form of light
energy. 2. ATP is used to store energy
needed for life processes. 3. ADP is
converted to ATP by the addition of
another phosphate group to an ADP
molecule. 4. When ATP is changed to
ADP, a phosphate group is removed. The
removal of a phosphate group releases
energy to the cell. 5.
