Solutions for Introduction to algorithms second edition Philip Bille
The author of this document takes absolutely no responsibility
for the contents. This is merely a vague suggestion to a solution
to some of the exercises posed in the book Introduction to algo-
rithms by Cormen, Leiserson and Rivest.

Nicely typeset solutions will receive a small amount of extra
credit, at the discretion of the course sta . If you are interested in
this option, try using LATEX to typeset your solutions or a nicely
formatted Mathematica notebook.

Introduction to Algorithms, Third Edition

We could modify the Merge Sort algorithm to count the number of inversions in the array. The key point is that if we find $L[i] > R[j]$, then each element of $L[i:]$ (represent the subarray from $L[i]$) would be as an inversion with $R[j]$, since array L is sorted. COUNTING-INVERSIONS and INTER-INVERSIONS shows the pseudocode of this algorithm.
