There are 2^{n+1} possible "states", with a maximum entropy of $\log_2(2^{n+1})$ bits. Hence in this situation, one would require at least $\log_2(2^{n+1}) = n+1$ weighings to extract enough information for determination of the odd coin, which gives the same result as above. (b) There are many solutions to this problem.

Here we have the solutions to all the problems in the second edition of Elements of Information Theory. First a word about how the problems and solutions were generated. The problems arose over the many years the authors taught this course. At first the homework problems and exam problems were generated each week. After a few years of
