iFIX security file structure prevents iFIX security users from being members of more than 12 iFIX security groups at the same time. You can assign no more than 20 characters when naming global groups on domain controllers that are configured to support access by users on systems earlier than Windows 2000.

Quick Start Guide

iFIX makes it easier to find information by changing as the user moves through the system. Navigation derives from the model structure built by the engineer. The context follows the asset definition and is defined only once for a class of assets.
