manipulate the angle of the tool, relative to the cut pattern, puts a greater amount of control in your hands. The cut speed, finish quality, and tool life can all be improved with tool axis control. Mastercam 5-Axis Curve Machining and Drilling is a practical point of entry into multiaxis machining, creating quality toolpaths while reducing programming time. Required Core ...

Regardless of the user's choice of a 4-axis or 5-axis machine, Port Expert will minimize wasted machine movement by remaining in 3-axis mode for as long as possible. Flexibility Port Expert supports 4-axis or 5-axis simultaneous motion for both roughing and finishing, so you can take advantage of the rigidity of a 4-axis setup or the reach of ...

Anyways, that port surface is typical of what we do. I have been using the Port 5 axis in X2 and it has worked pretty good for me. Didn't have as good of luck with Advanced Multiaxis. I couldn't get the cutter to go down around the sides of the valve guide as well as in the port tool path and using a drive surface.

accurate, efficient engine cylinder head porting toolpaths on port surface or solid data. The Port Expert toolpaths use 3-axis machining as far into the port as possible, and then convert automatically to 5-axis motion with minimum tilt.

Customer Resources | Mastercam Support
Port Machining uses 3-axis machining as far into the port as possible, and then switches to 5-axis motion. The system automatically overlaps top/bottom strategies to ensure smooth transitions where the tool paths meet. Both roughing and finishing tool paths are provided and stock can be represented as castings or billet.
