Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.

Rudin's Principles of Mathematical Analysis is the one to beat in this field. Apostol's treatment is not that different from Rudin's. The books were written about the same time, with Rudin having

A very good review of these results can
be find in the volume 4 of Thirring's "A
Course in Mathematical Physics". Even
the book version is a bit hard to read, as
much mathematical analysis is required.
The "Analysis" of Lieb and Loss is a book
on analysis which has as a theme the
great result of Lieb and Thirring. It is a
real book on analysis.
