Levinson argues that the life cycle comprises a sequence of four eras, each lasting for approximately twenty-five years. He also identifies a number of developmental periods within these eras, concentrating on early and middle adulthood.

Ecological systems theory - Wikipedia

Recent events highlight the importance of examining the impact of economic downturns on population health. The Great Depression of the 1930s was the most important economic downturn in the U.S. in the twentieth century. We used historical life expectancy and mortality data to examine associations of ...

Concepts of Modern Physics - Portland State University

Ecological systems theory (also called development in context or human ecology theory) offers a framework through which community psychologists examine individuals' relationships within communities and the wider society. The theory is also commonly referred to as the ecological/systems framework. It identifies five environmental systems with which an individual interacts.

The life course has become a topic of growing interest within the social sciences. Attempts to link this sub-discipline with life span developmental psychology have been called for but with little sign of success. In this paper, we seek to address three interlinked issues concerning the potential ...

Piaget's theory of cognitive development is a comprehensive theory about the nature and development of human intelligence. Piaget believed that one's childhood plays a vital and active role in a person's development. Piaget's idea is primarily known as a developmental stage theory. The theory deals with the nature of knowledge itself and how humans gradually come to acquire, construct ...

Human Growth and Development - CLEP - The College Board

We are considered in late adulthood from the time we reach our mid-sixties until death. In this lesson, we will learn how many people are in late adulthood, how that number is expected to change, and how life changes and continues to be the same as before in late adulthood.
