An important feature of Metasploit is the backend database support for PostgreSQL, which you can use to store your penetration-testing results. Any penetration test consists of lots of information and can run for several days, so it becomes essential to store the intermediate results and findings, such as target host data, system logs, collected evidence, and report data.

Integrating with NeXpose - Metasploit Penetration Testing ...
Before moving to the next topic, let's talk about the different types of shell available. When looking at the list of available shells, they fall into two categories: bind and reverse.. A bind shell instructs the target to start the command shell and listen on a local port, allowing the attacker to connect to the target on the listening port.
