~~The difference between chat and messaging | Zendesk Blog~~

Web Messaging or cross-document messaging, is an API introduced in the WHATWG HTML5 draft specification, allowing documents to communicate with one another across different origins, or source domains while rendered in a web browser. Prior to HTML5, web browsers disallowed cross-site scripting, to protect against security attacks. This practice barred communication between non-hostile pages as ...

~~Modern Messaging for Application Architecture | AWS~~

Unlike message queues, which batch messages until they are retrieved, message topics transfer messages with no or very little queuing, and push them out immediately to all subscribers. All components that subscribe to the topic will receive every message that is broadcast, unless a message filtering policy is set by the subscriber.
