His laboratory studies the molecular interactions that regulate transcription initiation in mammalian cells, focusing particular attention on transcription factors encoded by oncogenes and tumor suppressors. He teaches introductory courses in molecular biology and virology and an advanced course in cell biology of the nucleus.

Harvey Lodish, Member of the National Academy of Sciences, is a Member of the Whitehead Institute for Biomedical Research and Professor of Biology at Massachusetts Institute of Technology. His laboratory studies signaling by the erythropoietin, TGFβ, and insulin receptors, as well as the functions of a family of mammalian fatty acid transporters.

Excerpt. Molecular Biology of the Cell is the classic in-depth text reference in cell biology. By extracting fundamental concepts and meaning from this enormous and ever-growing field, the authors tell the story of cell biology, and create a coherent framework through which non-expert readers may approach the subject.

Molecular Cell Biology / Edition 4. Molecular Cell Biology is a perspective on living systems that arose from the union of three other disciplines: biochemistry, genetics and anatomical cell biology. Molecular Cell Biology provides a comprehensive, authoritative introduction to the current state of knowledge in this dynamic field.

All the concepts of molecular cell biology continue to be derived from experiments, and powerful experimental tools that allow the study of living cells and organisms at higher and higher levels of resolution are being developed constantly. In this fourth edition, we address the current state of molecular cell biology and look forward to what further exploration will uncover in the twenty-first century.

Molecular Biology of the Cell sets forth the current understanding of cell biology (completely updated as of Autumn 2001), and it explores the intriguing implications and possibilities of the great deal that remains unknown. The hallmark features of previous editions continue in the Fourth Edition.

Section 13.4 Molecular Mechanisms for Regulating Mitotic Events So far, we have seen that a regulated increase in MPF activity induces entry into mitosis . Presumably, the entry into mitosis is a consequence of the phosphorylation of specific proteins by the protein kinase activity of MPF.

Assembly of Collagen Fibers Begins in the ER and Is Completed outside the Cell Collagen biosynthesis and assembly follows the normal pathway for a secreted protein (see Figure 17-13). The collagen chains are synthesized as longer precursors called procollagens; the growing peptide chains are co-translationally transported into the lumen of the rough endoplasmic reticulum (ER).

Molecular Cell Biology, 4th edition. Molecular Cell Biology concentrates on the macromolecules and reactions studied by biochemists, the processes described by cell biologists, and the gene control pathways identified by molecular biologists and geneticists. In this millennium, two gathering forces will reshape molecular cell biology: genomics...

Molecular Cell Biology, in its fourth edition, at 1084 pages is nearly 300 pages shorter than its predecessor. This is largely due to smaller print and smaller figures, which in no way diminish the readability of the text. Molecular Cell Biology stands out as a text directed for advanced undergraduates and graduate students.

I am an M.D., but needed to improved my knowledge and understanding of molecular cell biology, as this is where the fight against disease, including cancer, is being waged now. I'm glad I bought the book, in spite of its high price, size, weight, and complexity.
