3. Pipe stress analysis is only one portion of piping engineering. There are other major considerations before performing the stress analysis. If the preparation work has been done well, very few piping system designs will fail the pipe stress evaluation criteria.

Pipe Stress Engineering - ASME Digital Collection

Piping constitutes 25% to 35% of the material of a process plant, requires 30% to 40% of the erection labor, and consumes 40% to 48% of the engineering man-hours [1]. The actual importance of piping, however, can far exceed these percentages. An entire piping system is composed of a large number of components.
