Using MATLAB, make plots of the signals below. Put your code in a Matlab script file so you can rerun it from the Matlab command after you make revisions to your file. Use the subplot command to put several plots on the same page. Print out the plots and turn them in with your code. Use help subplot to find out how to use the command.

Automatic Train Operation and Control Using MATLAB: This project implements an automatic train stop system with signal checking, speed checking and obstacle sensing system. In addition to this, it also includes automatic train warning system.

Signals and Systems Using MATLAB by Luis Chaparro

Examples of signal processing applications such as compact-disc player, software-defined radio and cognitive radio, and computer-controlled systems are also discussed. The chapter concludes with a soft introduction to MATLAB for numerical and symbolic computations, a widely used high-level computational tool for analysis and design.

Signals And Systems Using Matlab

Signals and Systems Using MATLAB, Third Edition, features a pedagogically rich and accessible approach to what can commonly be a mathematically dry subject. Historical notes and common mistakes combined with applications in controls, communications and signal processing help students understand and appreciate the usefulness of the techniques described in the text.

Each chapter contains a section with MatLab applications. Pedagogically rich introduction to signals and systems using historical notes, pointing out "common mistakes", and relating concepts to realistic examples throughout to motivate learning the material

Signals and Systems using MATLAB: Luis Chaparro Ph.D ...

Taking advantage of the eigenfunction property of linear time-invariant (LTI) systems, the steady-state response of these systems to periodic signals is easily obtained. MATLAB is used to represent and process periodic continuous-time signals.
