The independent variable in an experiment is the variable that the investigator purposely changes to produce an outcome. A helpful tip to remember what the independent variable is: think about the phrase "I change it". Both the phrase and the word independent begin with the letter I.

~~Science Process Skills Quizzes & Trivia—ProProfs~~

SCIENCE PROCESS SKILLS Science process occurs naturally, spontaneously in our minds. By logically breaking down the steps in our thinking, we can use science process to find out how to answer our questions about how the world works. Science process is not just useful in science, but in any situation that requires critical thinking.

~~WEF—Skills Builder~~

Scientific Processes 1.1 The scientific method is a process that helps you find answers to your questions about the world. The process starts with a question and your answer to the question based on experience and knowledge. This "answer" is called your hypothesis. The next step in the process is to test your hypothesis by creating ...

~~Science Process Skills Quiz—ProProfs Quiz~~

processes of doing science are the science process skills that scientists use in the process of doing science. Since science is about asking questions and finding answers to questions, these are actually the same skills that we all use in our daily lives as we try to figure out everyday questions.

Skills Builder provides feedback on your answers as well as references for follow-up study sources. Results are completely confidential and are not recorded. Additional Resources. If you find WEF's Skills Builder tool useful, you may want to check out the following additional study materials: Operations glossary of water terms (see below)

~~socs.nemo.k12.ar.us~~

SCIENCE PROCESS SKILLS. Basic Science Process Skills: Observing - using your senses to gather information about an object or event. It is description of what was actually perceived. This information is considered qualitative data. Measuring - using standard measures or estimations to describe specific dimensions of an object or event.

~~Science Skill Builders—iTLM~~

Answer: You need to convert 10,000,000 meters to kilometers. Since 1 meter = 0.001 kilometers, 0.001 is the multiplication factor. To solve, multiply 10,000,000 0.001 km = 10,000 km. So, it is 10,000 kilometers from the North Pole to the equator. These are the standard units of measurement that you will use in your scientific studies.
