## **Start-stop system - Wikipedia**

It will typically require about 45 minutes of engine operation (which the automatic engine start/stop system will control) to fully recharge a battery HVAC system for an additional 8-10 hours of operation.

## **Start Stop Engine Control**

Start-stop system. On a manual transmission vehicle, stop-start is activated as follows: Stop car and press clutch - move gear lever to neutral - release clutch - then the engine stops. The engine won't stop if the car is moving, even if the aforementioned steps are followed (note that this isn't true for all cars).

## **Five Things You Need To Know About Stop/Start Systems**

Start-Stop Technology Is Spreading (Like It or Not) Start-Stop Technology Is Spreading (Like It or Not) A sophisticated set of sensors monitors the engine and cabin temperatures. If the air-conditioning needs to run continually to cool the interior, the engine will restart or stay on. In stop-and-go freeway traffic,...

## **Little-Known Trick Will Disable Engine Auto-Stop-Start ...**

A good idea whose time has passed. It's a great idea, in theory. Your engine shuts off at red lights, stop signs, and busy Taco Bell drive-throughs—whenever a momentary pause provides an opportunity to save some fuel. In practice, stop/start systems are annoying, pointless, and sometimes dangerous.

### **It's Time For Stop/Start Engines To Go - Popular Mechanics**

Most such systems already keep the car's accessories—lights, wipers, audio system, climate control—operating as standard. That limits the amount of time the engine can remain off, generally to a period between 45 and 90 seconds. But in stop-and-go traffic, that's often enough to save significant amounts of fuel.
