Use the Comparison Test, with $a_n = n^{-2} + 1$ and $b_n = \frac{1}{n^{3/2}}$ $n^{-2} + 1 > \frac{1}{n^{3/2}}$, and $\sum_{n=1}^{\infty} \frac{1}{n^{3/2}}$ is a convergent p-series ($p = \frac{3}{2}$)

Strategy for Testing Series: Solutions

In this section we give a general set of guidelines for determining which test to use in determining if an infinite series will converge or diverge. Note as well that there really isn't one set of guidelines that will always work and so you always need to be flexible in following this set of guidelines. A summary of all the various tests, as well as conditions that must be met to use them ...

Strategy for Testing Series

In this section we will discuss in greater detail the convergence and divergence of infinite series. We will illustrate how partial sums are used to determine if an infinite series converges or diverges. We will also give the Divergence Test for series in this section.

Strategy for Testing Series We now have several ways of testing a series for convergence or divergence; the problem is to decide which test to use on which series. In this respect testing series is similar to integrating functions. Again there are no hard and fast rules about which test to apply to a given series, but you may find the ...

Strategy For Testing Series Solutions

Strategy for Testing Series: Solutions 1. Since $(-5)^{-n} = (-1/5)^n$, this is a geometric series. Because $| -1/5 | < 1$, it converges. 2. Since $n^2 < n^2 + 6n = n(n + 6)$ for all $n \geq 0$, we have $1/n(n + 6) < 1/n^2$. Because $\sum 1/n^2$ converges (it's a p-series with $p = 2 > 1$), the comparison test implies that $\sum 1/(n(n+6))$ also converges.
