A pressure regulator keeps the gas entering the stove at a constant pressure of about 1/6 PSI, regardless of fluctuations in the supply pressure. In a cooktop or stove, this pressure regulator feeds a main gas header, or manifold, located under the cooktop. The surface burner gas valves are mounted directly to the gas header.

This is a flat style oven igniter used to light the oven burner in a gas range. When the element in this igniter glows white hot, the gas is released from the safety valves, which lights the oven burner. If your range is not heating properly, or not heating at all, it might indicate a problem with this part.

The pilot light burns easily, but the oven burner won't come on. The pilot light appears to be coming out of a small metal block that has a small gas tube and what appears to be a thermocouple going to it. The end of it where the flame is looks like the head of a nail. <o > </o > I have a reprint of an old manual.
