Ultrasonic-type: These silent lenses can be overridden with full-time manual focus. Some companies refer to these lenses as hypersonic, silent wave, or silent drive.

~~A Guide to Mastering Manual Focus~~

What is 4D FOCUS? Conventional autofocus (AF) deals with space alone. 4D FOCUS goes one step further with an innovative image sensor that picks up both space and time to capture moving subjects with new clarity, allowing you to take crisper photos than ever. Plain-old AF is a thing of the past. The future of photography is in motion.

~~Advanced Camera Settings Mode | 4D FOCUS | Sony US~~

Macro or close-up modes tend to direct the camera's focus to be nearer the camera. They may shrink the aperture and restrict the camera to wide-angle in an attempt to broaden the depth-of-field (to include closer objects) - this last mode of operation is often known as Super Macro. Movie mode allows a still camera to take moving pictures.

more high profile video projects by award winning directors than any other video app: Unsane & High Flying Bird by Steven Soderbergh

~~Manual FX Camera - FX Studio - Apps on Google Play~~

The older manual focus lenses lack these electronic contacts and processors, and have very limited information exchange with the camera body. These are called “non-CPU” lenses. One piece of information that is required for the camera to provide exposure metering is the aperture value set on the lens.

~~Why Focus by Wire Systems in Camera Lenses Suck~~

Set the camera to Manual Focus mode. If you are using an AF-S lens, set the switch on the lens itself to M. (Depending on your lens, it may carry the label AF/MF instead of A/M.) If you are using an AF lens, two switches are involved. First, set the lens switch to M, as just described.
