I was out riding at about 30mph and the waverunner just quit out on me. It does nothing when I hit the start button, and doesn't show "START" when I hold down the MODE button. I checked the ground cable going from the battery to the block it it feels firm, plus I checked the ground with a voltmeter, hooking the negative to the block and the positive to the battery and it read 12 volts.

I'm looking to replace my piece of junk Polaris PWC with a Yamaha. There are several of the GP760 and GP800 models in good shape for sale in my price range. I'm looking at ones that are mostly 1999 to 2001 models. I know the 800 has 120 HP vs. 90 HP for the 760. What I'd like to know is if the 800 is going to be less reliable. I would rather have more reliability than more HP.
